

## Rectangular sight glass PN 16 / 40

Level indicator with Lloyd's design appraisal

Type 330

#### **APPLICATION:**

Observation and illumination of the liquid level inside closed vessels (boilers, tanks, silos, etc.).

These sightglasses are angular flange sockets for welding in or on, each completed with a firmly screwed sightglass plate inserted between the seals.

# Operating conditions: Temperature: (depending on glass and gasket) Pressure: 243 °C Boro Reflex 300 °C Boro transparent with mica protection 243 °C Boro transparent 320 °C Boro transparent with mica protection ≥ -1¹ to 16 / 40² Bar

- <sup>1</sup> depends on environmental variables
- <sup>2</sup> see pressure remark on next page

Materials:				
Flange:	1.4571, 1.4404, 1.4541, 1.4539, P265GH			
Glass:	Borosilicate glass DIN 7081 Reflex or transparent glass			
Gasket:	PTFE; FKM; NBR; C4400; Silicone; EPDM; Graphite			
Screws:	A4-70			
Special materials on request				

#### **INSTALLATION NOTE:**

After the base frame has been welded in, check whether the sealing surfaces have warped! If necessary, rework must be performed! Please also observe the specified torques for the screw connection! The operating pressure does not apply to the base frame, which must be checked together with the pressure device according to AD data sheet B9!

### **IMPORTANT:**

The design appraisal by Lloyd's Register does not replace the final approval of the entire system! A new final approval of the system or the tank is required after welding in the base frame.

## **REFLEX AND TRANSPARENT GLASS:**

A reflex sight glass is recommended for dark media, dark or non-illuminated vessels. (see adjacent picture) Due to the refraction of light in the integrated prisms, the fill level may be better visible. However, if the vessel is illuminated, the medium is very bright or the colour of the medium must be visible, a transparent glass should be used. We are happy to help you with the selection.

Rectangular sight glass with Lloyd's design appraisal  $(\Delta P \le -1^1 \text{ bis } 16 / 40^2 \text{ bar})$

Level indicator with Lloyd's design appraisal

#### <sup>2</sup>PRESSURE REMARK:

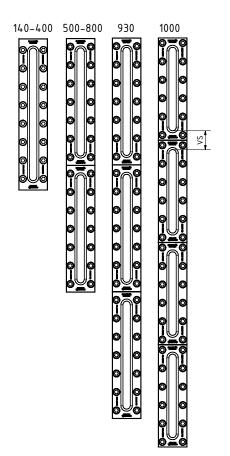

The operating pressure of 40 bar is only possible with transparent glass for liquid media without technically significant glass attack. For transparent glasses exposed to steam or aggressive media, the maximum operating pressure is PS = 35 bar. More detailed information can be found in our info sheet DIN 7081.

#### **CONCEALED VIEW (VS):**

Concealed visibility is formed in the area between the individual longitudinal glasses for level indicators of long sizes. Because of the manufacturing length of the longitudinal glasses in accordance with DIN 7080, a concealed view cannot be avoided from an overall length of 500 mm onward. The layout of the sizes 140 mm to 1000 mm can be seen in the following illustration.

INFO: Unless otherwise stated, the factory standard highlighted is supplied.

#### **SPECIAL DESIGNS/OPTIONS:**

- a) High temperature version on request <sup>5</sup>
- b) LED or halogen lights, ATEX-certified, EX
- c) Other options on request

#### **EXAMPLE:**

11-330-400-2-1-7-1-0 equals the product code:

ACI Type 330 400 mm long Base frame 1.4571 Borosilicate glass Transparent gasket graphite PN16 standard version

## **RECOMMENDATION:**

For aggressive media or steam, mica discs should be used to protect the glass. (Not possible with reflex sight glasses as they would lose their function.)
